GEOLOGICAL SURVEY · FIELD REPORT · FIG. 1

Fault Lines

Every class has fault lines. See them before the exam does.

Abdulrahman Adeeyo · Build with AI: Basics · faultlines-kappa.vercel.app

Made with GAMMA

SECTION A–A · THE MARK BOOK PROBLEM

A mark tells you who lost points

It never tells you what the class believes.

Mark 120 scripts. Write "see me" on thirty. Monday comes and you still cannot name the one idea half the class shares.

Made with GAMMA

An answer is not a mark

It is evidence of a belief.

Two students can write the same sentence for opposite reasons. Group by belief and the class looks like a landscape, not a bell curve.

SURFACE SCRIPT · REASON A

"Gravity pulls equally on both blocks"

Belief: Gravity is a uniform contact force applied by the table surface.

SURFACE SCRIPT · REASON B

"Gravity pulls equally on both blocks"

Belief: Mass does not change the gravitational force, confusing force with acceleration.

Made with GAMMA

Paste. See the beliefs.

28 messy answers become five named beliefs.

One question, one paste, about a minute. Grouped by the idea underneath, not by score or wording.

INPUT

One question paste

Drop raw free-text answers straight from paper or Google Forms.

ANALYSIS

Cluster by mental model

Algorithms group identical misconceptions across varied student wording.

OUTPUT

5 named strata bands

Immediate diagnosis naming the shared misunderstandings across the room.

Made with GAMMA

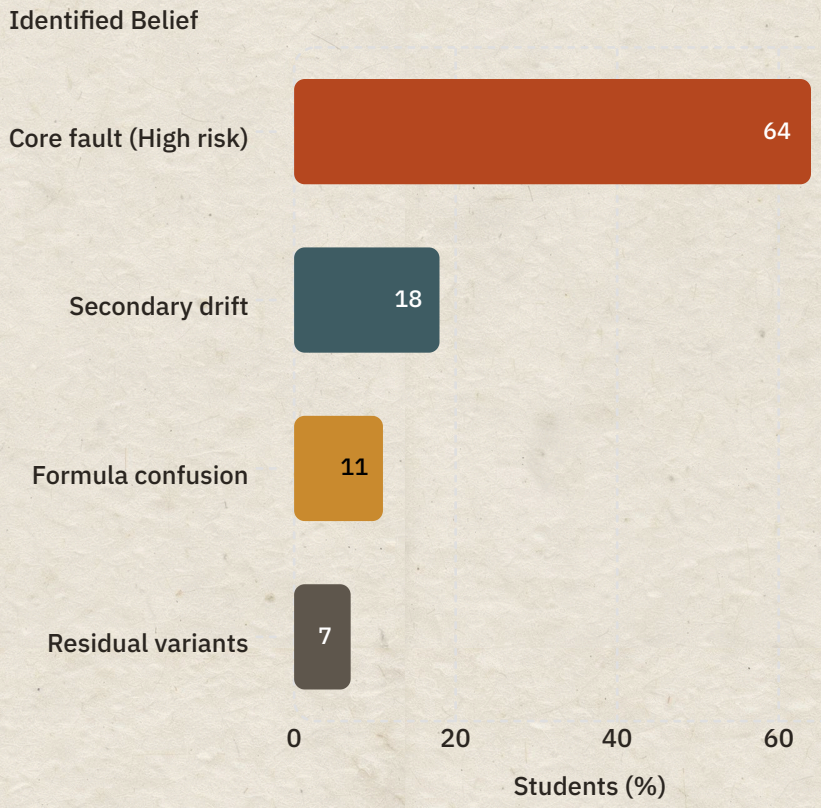

FIG. 3 · FREQUENCY VS EXAM DAMAGE

18 of 28 · 64%

Sized by share of class, ranked by exam risk

One "start here" call-out names the belief to reteach first.

⚠ **Start here:** Confusion between mass and weight carries the steepest point loss on terminal papers.

Made with GAMMA

STUDENT FEEDBACK · FIELD VERBATIM

Every belief is proven

Verbatim quotes, exact counts, a 5-minute reteach.

> *"I kept mixing up the right answer with the answer that just sounded more familiar, even though I knew it wasn't the best fit."*

Student comment (verbatim) · Class 11 Physics

Quotes are the student's own words, unedited. Each belief also gets a follow-up question to test whether it landed.

Made with GAMMA

What it refuses to do

"Not sure — needs your eyes"

Too vague to read? It goes in a separate bucket with the raw answer shown. No invented misconception, ever.

REFUSAL 01	REFUSAL 02	REFUSAL 03
No hallucinations Never fabricates a plausible-sounding pedagogical misconception when evidence is thin.	**Raw word isolation** Ambiguous or illegible responses stay completely unranked in the needs-your-eyes bucket.	**Zero guesswork** A guess costs a teacher an entire reteach lesson. True ambiguity is flagged honestly.

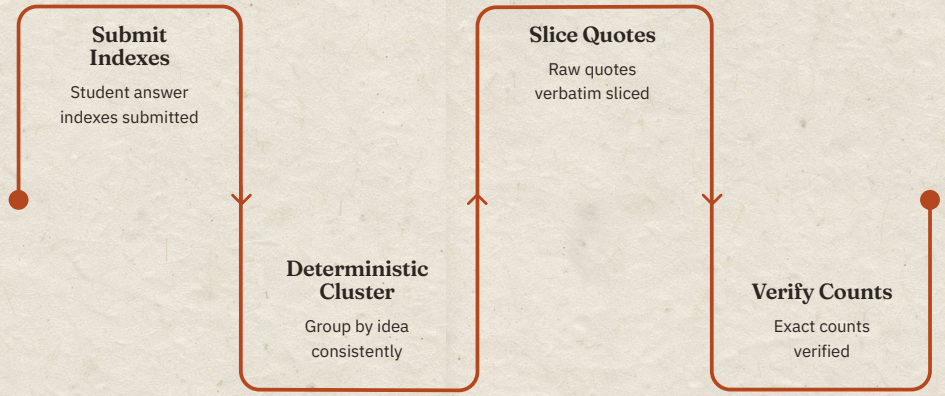

Made with GAMMA

SECTION B–B · DETERMINISTIC CLUSTERING

Faithfulness by construction, not by hope

The model only answers: which answers belong together.

Quotes are sliced from your paste. Counts are computed from the grouping. Every answer lands in a band or the not-sure list.

Made with GAMMA

Plan first, then build

Scope, PRD, spec and a slice checklist, before any code.

Devpost Learn Skill Pack: six skills, each slice verified mechanically before the next began.

STAGE 01

Scope & PRD

Boundary rules set and strict output contracts agreed.

STAGE 02

Technical Spec

Index-only model clustering design locked in schema.

STAGE 03

Slice Checklist

Mechanical verification pass written before implementation.

STAGE 04

Verified Slices

Six distinct skills tested systematically end-to-end.

FIG. 4 · DECK SPECIFICATION & PRODUCTION ASSETS

Deliberately complete, key-free

English, French, Spanish, German, Portuguese, Yorùbá and right-to-left Arabic. Every asset is programmatic.

7

LANGUAGES

Includes right-to-left Arabic & Yorùbá localization.

PWA

OFFLINE READY

Zero cloud dependencies for cached local scripts.

84

TEST CASES

Full automated test suite verifying each grouping slice.

0

ACCOUNTS

Key-free access. No logins, tracking, or passwords.
